FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

In an effort to stimulate production, we propose to run a Permeability Profile Survey, then squeeze cement permeable section to shut off water production; afterwards drilling out cement plug and deepening well to approximately 4400' with reverse circulation coring equipment. After well has been drilled to proposed depth of 4400', a Permeability Profile Survey will be made and a 5 1/2" liner set and cemented from TD up into the 8 5/8" casing string approximately 40'. The liner will then be selectively perforated and the formation acidized based upon information obtained from analysis of the core and permeability profile surveys.
