NEW MEXICO STATE LAND OFFIC

OFFICE OF THE STATE GEOLOGIST

SANTA FE, NEW MEXICO

MISCELLANEOUS REPORTS ON WELLS

Submit this report in duplicate to the State Geologist or proper Oil and Gas Inspector within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of water shut-off, result of abandonment of well, and other important operations, even though the work was witnessed by the State Geologist or Oil and Gas Inspector. Reports on minor operations need not be signed and sworn to before a notary public, but such operations should be witnessed by an Oil and Gas Inspector if possible. Indicate nature of report by checking below:

REFORT ON BEGINNING DRILLING OPERATIONS	REPORT ON DEEPENING WELL REPORT ON PULLING OR OTHERWISE ALTERING CASING REPORT ON REPAIRING WELL		
REPORT ON RESULT OF SHOOTING WELL			
REPORT ON RESULT OF TEST OF WATER SHUT-OFF			
REPORT ON RESULT OF ABANDONMENT OF WELL	REPORT ON RESULT OF		

Fort North Texas, March 13, 1934

Mr. B. H. Wells State Geologist,

Santa Fe, N. Mex.

	Following is a report on the work done and the results obtained under the heading noted above at the					
	Tevas Company is	P 7	ank Selman	Well	No1	in the

N

DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

7" O.D. casing is cemented in this well at 3995 feet. The well is equipped with 2" external upset tubing suspended 2 feet off bottom with an HS" perforated nipple 45[‡] from bettom or at 4130 feet, the total depth after plugging back being 4130 feet. Apparently the well was salted up above the perforation, as circulation between casing and tubing and up through tubing could not be established. Both tubing and casing were filled with oil under 1250 pounds pressure. Then an acid solution of 500 gallons of Commercial hydrochloric acid and 1000 gallons of water was put into the well through the tubing at 850 pounds pressure, followed by an oil load of 17-1/2 barrels, which was sufficient to flush all of acid solution out of tubing. This work was completed at 7:00 P.M. February 18, 1984. The well was then shut in for 120 hours, until 7:00 P.M. February 25, and was then produced from latter hour until Barch 6, 1984. The official proration test was made from 8:15 A.M. to 8:18 P.M. on March 6, during which test the well produced at the rate of 145 barrels of oil per day, flowing and pumping.

Subscribed and sworn to before me this

Mrs J. P. Lee

I hereby swear or affirm that the information given above is true and correct. Name C. B. Williams Position Assistant Division Manager Representing The Texas Company operator.
