

NEW MEXICO STATE LAND OFFICE
OFFICE OF THE STATE GEOLOGIST
 SANTA FE, NEW MEXICO

MISCELLANEOUS REPORTS ON WELLS

Submit this report in duplicate to the State Geologist or proper Oil and Gas Inspector within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of water shut-off, result of abandonment of well, and other important operations, even though the work was witnessed by the State Geologist or Oil and Gas Inspector. Reports on minor operations need not be signed and sworn to before a notary public, but such operations should be witnessed by an Oil and Gas inspector if possible.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON DEEPENING WELL	
REPORT ON RESULT OF SHOOTING WELL Acid Treatment	X	REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF WATER SHUT-OFF		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF ABANDONMENT OF WELL			

Dallas, Texas. Nov. 13, 1935.

Mr. **F. J. Vesely**, State Geologist, Oil & Gas Inspector,
 Santa Fe, N. Mex. - Box 522, Carlsbad, New Mexico.

Following is a report on the work done and the results obtained under the heading noted above at the **Sun Oil Company** **Wm. Maveaty** Well No. **3** in the **Company or Operator** **NE/4** of Sec. **35**, T. **19-S**, R. **36-E** N. M. P. M., **Monument** Oil Field, **Lea** County.

The dates of this work were as follows: **(see below)**

Notice of intention to do the work was (was not) submitted on Form SG **(not required)** on **19**, and approval of the proposed plan was (was not) obtained. (Cross out incorrect words.)

DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

Well treated with 4000 gallons, 5000 gallons, and 6000 gallons acid on Oct. 28th, Oct. 30th, and Nov. 9th respectively; but would not flow. Now preparing to pump.

Subscribed and sworn to before me this

13th day of **November**, 19 **35**

John S. McDermott
 Notary Public
 In & for Dallas County, Texas.
 My Commission expires **June 1, 1937.**

Remarks:

APPROVED

Title

1. The first step in the process of developing a new product is to identify a market need. This is often done through market research, which can be conducted in a number of ways. One common method is to conduct surveys of potential customers, asking them about their needs and preferences. Another method is to observe customers in their natural environment, looking for signs of unmet needs or problems. A third method is to analyze sales data from existing products, looking for trends and patterns that suggest new opportunities. Once a market need has been identified, the next step is to develop a concept for a new product that addresses that need. This is often done through brainstorming sessions with a team of experts, including marketing, engineering, and design. The concept should be based on a clear understanding of the market need and should be designed to provide a unique and valuable solution. Once a concept has been developed, the next step is to create a prototype of the product. This is often done using 3D printing or other rapid prototyping techniques. The prototype should be used to test the concept and to gather feedback from potential customers. Once the prototype has been tested and feedback has been gathered, the next step is to develop a detailed design for the product. This is often done using computer-aided design (CAD) software. The design should be based on the feedback from the prototype and should be designed to be manufacturable and cost-effective. Once a detailed design has been developed, the next step is to create a business plan for the product. This is often done by a team of experts, including marketing, finance, and operations. The business plan should outline the market strategy, the production process, and the financial projections for the product. Once a business plan has been developed, the next step is to secure funding for the product. This is often done through a combination of sources, including venture capital, angel investors, and crowdfunding. Once funding has been secured, the next step is to begin production of the product. This is often done by a team of experts, including manufacturing, logistics, and distribution. The production process should be based on the detailed design and the business plan, and should be designed to be efficient and cost-effective. Once production has begun, the next step is to launch the product into the market. This is often done through a combination of marketing and sales efforts, including advertising, public relations, and direct sales. The launch should be based on the market strategy outlined in the business plan, and should be designed to generate maximum interest and sales for the product. Once the product has been launched, the next step is to monitor its performance in the market. This is often done through a combination of sales data, customer feedback, and market research. The performance should be used to identify areas for improvement and to make adjustments to the product and the marketing strategy as needed. Once the product's performance has been monitored, the next step is to evaluate the overall success of the product. This is often done by a team of experts, including marketing, finance, and operations. The evaluation should be based on the business plan, the production process, and the market performance, and should be designed to provide a clear and concise summary of the product's overall success. Once the product's overall success has been evaluated, the next step is to decide whether to continue production of the product. This is often done by a team of experts, including marketing, finance, and operations. The decision should be based on the evaluation, and should be designed to provide a clear and concise summary of the product's overall success.

There is a significant positive correlation between the two variables.

1. The first of the two main parts of the report is a general survey of the situation in the country. This part is divided into two sections: the first section deals with the general situation, and the second section deals with the situation in the various provinces. The second part of the report is a detailed account of the events of the year, and is divided into two sections: the first section deals with the events of the year, and the second section deals with the events of the year.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

DATE: 11/11/2011 TIME: 10:11 AM

1. The proposed plan was approved by the Board of Directors of the company on June 15, 1954.
