## DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

Casing and well head connections were tested with 900 # pressure retained for 30 minutes. Test O. K. Casing was cemented on a shoulder 50 feet off bottom. On drill stem test the hole below the shoulder showed the presence of considerable porosity containing oil and gas. Because of the porosity it was impossible to pressure test the casing after drilling plug, and presence of considerable oil and gas prevented a bailing test.
