1. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Arar and Collins (1971) using a Shimadzu UV-160U ultraviolet-visible spectrophotometer.

[illegible]

• Explain the importance of the following:

$$f_{\text{eff}} = \frac{1}{2} \left(\frac{1}{f_{\text{eff}}^{\text{min}}} + \frac{1}{f_{\text{eff}}^{\text{max}}} \right) \quad (1)$$

1. The first group of people who are likely to be affected by the proposed changes are those who are currently employed in the public sector. This group includes a wide range of individuals, from those who are employed in the public sector to those who are employed in the private sector. The proposed changes are likely to have a significant impact on this group, as they will be required to adapt to the new requirements. This may result in some individuals being required to leave their current positions, while others may be required to take on new roles. The impact on this group is likely to be significant, as it will affect a large number of people who are currently employed in the public sector.

Figure 1. The effect of the concentration of the H_2O_2 solution on the amount of the released H_2O from the H_2O_2 -loaded hydrogel. The amount of the released H_2O was measured at 37°C for 24 h. The amount of the released H_2O was normalized by the amount of the loaded H_2O_2 . The error bars represent the standard deviation of the mean.
