(Range)

(Meridian)

Wildcat
(Field)**Lea**
(County or Subdivision)**New Mexico**
(State or Territory)The elevation of the derrick floor above sea level is **3721.4** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

7" casing was set at 14,151' and cemented with 565 sacks of cement. The well was then drilled to a T. D. of 15,040' and no commercial production was found below the 7" casing. It is planned to plug back into the 7" casing and to complete inside the 7" casing.

It is proposed to set a 40 sack cement plug from T.D. back up to 14,840'. Then set a Baker cast iron bridging plug in the 7" casing at 14,080' and then set a 20 sack cement plug on top of the Baker plug from 14,080' back to 13,980'.
Mr. E. W. Standley, District Engineer of the United States Department of the Interior, Geological Survey, Hobbs, New Mexico has requested that the well be plugged back in the above manner.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
