Re: West Pearl Queen Unit, wells #122 and #169

Dear Sirs:

Armstrong Energy Corporation will temporarily abandon the West Pearl Queen Unit #122 water injection well on May 10th by running a CIBP and setting it at 4600' plus or minus. We will test the annulus to 500# for 15 minutes, circulate packer fluid and seal the tubing head off.

We will then move over to the WPQU #169, currently a producer, and convert it to water injection. NMOCDD order WFX-580, just signed in Santa Fe, authorizes this work. We will run plastic lined tubing and an injection packer in this well May 11th.

The annulus will be circulated with packer fluid and tested to 500# for 15 minutes.

We will call your office to verify the times of these procedures.

Yours very truly,

Thomas K. Scroggin
Production Supervisor
Armstrong Energy Corporation
