13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Our intent, after much discussion with: Ted Lawson, a **HYDROMITE SPECIALIST** out of Giddings, Texas is:

Set: **12 Feet (200 lbs) of HYDROMITE** on top of the Seven Rivers Reef, from: **DEPTH: 3703' to 2691'.**

**HYDROMITE** has been used very successfully in the past for **SHUTTING OFF REEF WATER** in the **SILVER NO. 1**. Our reasoning for reusing this method is so we might continue producing out of the **Yates "C" Zone**, as we had done prior to the previous deepening.

Should this procedure prove ineffective our further intent will be: Set cement from: **DEPTH: 2691' to 3664'**, set a bridge plug at **3663'**, then **pour: 10 feet "more" of cement on top of the plug from; 3662' to 3652'.** This should be sufficient plug back for us to then; **Perforate and Frac the Upper Yates, Yates A and Yates B Zones** which correspond to the **DEPTHS: 3518' to 3558'.**
