Tomahawk "28" Fed Com No. 2 Drilling Program Page 4

- C. No conventional coring is anticipated.
- D. Further testing procedures will be determined after cementing the 5½" production casing at TD based on drill shows, log evaulation and/or drill stem test results.

9. Abnormal Conditions, Pressures, Temperatures, & Potential Hazards:

No abnormal pressures or temperatures are anticipated. The estimated bottom-hole temperature (BHT) at TD is 190°F and estimated bottom-hole pressure (BHP) is 6500 psig. No hydrogen sulfide or other hazardous gases or fluids have been encountered, reported or are known to exist at this depth in this area. No major loss circulation zones have been reported in offsetting wells.

10. <u>Potash Area</u>

BLM records indicate that this acreage is not currently leased for potash development.

11. Anticipated Starting Date and Duration of Operations:

Road and location work will not begin until approval has been received from the BLM. The anticipated spud date is October 15, 1993. Once commenced, the drilling operation should be finished in approximately 50 days. If the well is productive, an additional 30 days will be required for completion and testing before a decision is made to install permanent facilities.
