(Note: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

07/18/00 Read & Stevens proposes to plug and abandon the subject well. Original perfs for the Brushy Canyon were 8,098' to 8,116' with a CIBP set @ 8,050' and 35' of cement on top. Read & Stevens will set a CIBP @ 6,100' above existing Cherry Canyon perforations, and cap with 35' of cement. The top of cement on the 5 1/2" casing is 4,300', therefore, the 5 1/2" casing will be cut and pulled from approximately 4,200'. A 140' cement plug will be set across the 5 1/2" stub. Cement plugs will then be set from 2,100' to 1,600' across the top of the salt, from 500' to 400', and a 50' surface plug. A dry hole marker will be erected and location cleaned up.

14. I hereby certify that the foregoing is true and correct
