H. M. Britt B-10 No. 1

Hobbs, New Mexico

April 22

1932

Well No. 1 is located 660 ft. from N line and 330 ft. from E line of sec. 10
SW/4 Section 10
(1/4 Sec. and Sec. No.)
Monarch (Field)
20S (Twp.)
37E (Range)
100 (County or Subdivision)
N.H.M. (Meridian)
New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 3565 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

As per H.M.O.C.C. Order No. B-140 dated 4-15-32, it is proposed to dually complete the subject well in such a manner as to permit production of oil from the Grayburg formation and gas from the Queen formation.

Proposed manner of dual completion is as follows:

- (1) Pull tubing and run Radioactivity survey.
- (2) Set Baker model "B" retainer production packer at approximately 3660' in the 5 1/2" casing which is set at 3679'.
- (3) Perforate and test Queen formation between 3400' and 3550', of gas or oil produced from either formation. Oil and gas from the Grayburg is to be produced thru the tubing and gas from the Queen is to be produced through the annulus between the tubing and 5 1/2" casing.
- (4) Run tubing set in model "B" packer so as to prevent the co-mingling of gas or oil produced from either formation. Oil and gas from the Grayburg is to be produced thru the tubing and gas from the Queen is to be produced through the annulus between the tubing and 5 1/2" casing.

Your permission is requested to accomplish the dual completion as proposed.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
