1. A packer recompleted shall be commenced on each multiply completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remedia: work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Commission.

2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Commission in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.

3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized and for a mini-mum of two hours thereafter, provided however, that they need not remain shut-in more than 24 hours.

4. For flow Test So. 1, one zone of the dual completion shall be produced at the normal cate of production while the other zone remains shut-in. Such test shall be continued until the flowing wellhead pressure has become stabilized and for a minimum of two hours thereafter, provided however, that the flow test need not continue for more than 24 hours. 6. Flow Post 1. come the conducted even though no leak was indicated during Flow free the conducted for Flow Test No. 2 is to be the same as for Flow e the sense; that the previously produced zone shall remain shut-outly be compared as sy shut-in zone is produced.

7. The pressure control to the entire test, shall be continuously measured and required and required and recording pressure gauges, the accuracy of which must be appendently be deadweight tester at least twice, once at the beginning and which is the one of each flow test.

	escolibed tests shall be filed in triplicate
within 15 days alter completion	n of the test. Tests shall be filed with
the appropriate of forms of the	e of the New Mexico Oil Conservation Com-
	Packer Leakage Test Form Revised 11-1-58,
together with the module measure	searce recording gauge charts with all the
deadweight resources and seet	e taken indicated thereon. In lieu of
	ne operator may construct a pressure versus
	est, indicating thereon all pressure
changes	by the gauge charts as well as all dead-
	were taken. If the pressure curve is sub-
	be permanently filed in the operator's
office File off a set	se capany the Packer Leakage Test Form
when the lot inter-	with a gas-oil railo test period.
