ATTENTION: Mr. Joe Ramey

Gentlemen: Re: SEMU Permian No. 46

This has reference to our letter of March 23, 1967 and recent telephone conversations with your office concerning the possibility of communications between the Grayburg and Eumont Zones as indicated by our packer leakage test completed February 3, 1967.

On May 1, 1967, work was completed to convert the Grayburg Zone to water injection for the Skaggs Pool Waterflood. Attached is a copy of the USGS form 9-331 covering this conversion. This report is being forwarded to USGS today with sufficient copies for them to forward two copies to you.

The most recent data on this well is as follows:

GRAYBURG ZONE

Water is presently being injected. On test 6-7-67 injected 650 BW in 24 hours at 1,700# pressure.

EUMONT ZONE

This zone is connected to El Paso Natural Gas Company's line with a pressure of 250 to 260 pounds.
