cc: NMOCC File

REMARKS:

This well which had originally been drilled to 3854' had been shut in since 2-4-43 account excessive gas-oil ratio. On last test taken previous to shutting well in, well flowed 18 bbls. oil with 1900 MCF gas, GOR 10555/1. Deepening operations were commenced 8-30-44 and well was deepened from 3854' G.M. to 4402' D.F. Well was then plugged back to 4372' and 4" liner set at that depth. Tests of horizons at 4310'-4360', 4080-4300', 4020-4046' failed to obtain commercial production. Each of the above three zones were acidized with 1000 gallons of 20% acid. Well was finally plugged back to 3876' and acidized with 500 gallons acid from 3864-3876'. On final test 1-4-45 well tested 35 bbls. oil in 24 hours through 25/64" choke on 2" tubing flowing by gas lift.
