The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location at a T.D. of approx. 6980' with rotary tools in order to develop the Drinkard and Tubb oil reserves on the subject lease.

All casing points will be cemented in accordance with approved methods of the USGS and any special requirements will be complied with.

It is planned to use the following casing pattern: 13 3/8" surface string to be set at approx. 300' and cemented with 400 sacks to surface; 9 5/8" to be set at approx. 4000' and cemented with 300 sacks; 7" to be set at approx. 6980' and cemented with 400 sacks.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
