Well No. **51** is located **990** ft. from **XXN** line and **990** ft. from **XXE** line of sec. **15**
SE/4 Section 15 **20 S** **37 E** **107W**
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Undesignated **Lee** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location to a total depth of approximately 10,200' with rotary tools in order to test the Elmerburger oil reserves and to meet demands of the USGS for further development of federal leases comprising the Southwest Monument Unit. All casing points will be cemented in accordance with approved methods of the U. S. Geological Survey and any other special requirements will be complied with.

It is planned to use the following casing pattern: 13 3/8" to be set at 300' and cemented with approximately 300 sacks, cement to be circulated. 9 5/8" to be set at 4000' with 2500 sacks. 7" to be set to 10,200' with 500 sacks and to be perforated opposite the pay zone.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
