DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill a well with rotary tools to a depth of 4000' unless oil or gas in commercial quantities is encountered at a lesser depth. All strings of casing will be cemented or mudded, in accordance with U. S. G. S. regulations, to prevent infiltration of waters to other strata. The following casing will be run in this well.

13" - 265' to be cemented to the surface.

9-5/8" 1400' To be set on top of salt and cemented
with 300 sacks.7" 3800' To be set on top of oil pay and cemented
with 400 sacks.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
