

NEW MEXICO OIL CONSERVATION COMMISSION
Santa Fe, New Mexico

RECEIVED
APR 29 1937

MISCELLANEOUS NOTICES

Submit this notice in triplicate to the Oil Conservation Commission or its proper agent before the work specified is to begin. A copy will be returned to the sender on which will be given the approval, with any modifications considered advisable, or the rejection by the Commission or its agent, of the plan submitted. The plan as approved should be followed, and work should not begin until approval is obtained. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of notice by checking below:

NOTICE OF INTENTION TO TEST CASING SHUT-OFF		NOTICE OF INTENTION TO SHOOT OR CHANGE CASING WELL	XX
NOTICE OF INTENTION TO CHANGE PLANS		NOTICE OF INTENTION TO PULL OR OTHERWISE ALTER CASING	
NOTICE OF INTENTION TO REPAIR WELL		NOTICE OF INTENTION TO PLUG WELL	
NOTICE OF INTENTION TO DEEPEN WELL			

Midland, Texas.

April 28, 1937.

Place

Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intentiton to do certain work as described below at the _____

Phillips Petroleum Company Quapaw Well No. One in SE/4, SE/4
Company or Operator
of Sec. 19, T. 20-S, R. 37-E, N. M. P. M., Monument Field,
Lee County.

FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

Total depth 3840 in line. It is proposed to shoot pay formations with 80 quarts solidified nitro-glycerine, from approximately 3800' to 3840.

DUPLICATE

Approved APR 28 1937, 19_____
except as follows:

Phillips Petroleum Company
Company or Operator

By Carl Griffin

Position District Superintendent

Send communications regarding well to

Name Earl Griffin

Address Box #1390, Midland, Texas.

OIL CONSERVATION COMMISSION,
By Guy Shepard
Title Oil & Gas Inspector

1 C.R.

1. Introduction

The purpose of this study is to investigate the effects of various factors on the performance of a system. The study is organized as follows: Section 2 describes the system and the factors being studied. Section 3 presents the experimental design and the results of the experiments. Section 4 discusses the results and the conclusions of the study.

2. System and Factors

The system under study is a computer system. The factors being studied are the number of users, the amount of data, and the type of tasks.

The number of users is varied from 1 to 10. The amount of data is varied from 1 MB to 10 MB. The type of tasks is varied from simple to complex. The performance of the system is measured in terms of response time and throughput.

The results of the experiments show that the performance of the system is affected by the number of users, the amount of data, and the type of tasks.

The response time of the system increases as the number of users increases. The response time of the system also increases as the amount of data increases.

The throughput of the system decreases as the number of users increases. The throughput of the system also decreases as the amount of data increases.

The response time of the system is also affected by the type of tasks. The response time of the system is higher for complex tasks than for simple tasks.

The throughput of the system is also affected by the type of tasks. The throughput of the system is higher for simple tasks than for complex tasks.

The results of the experiments show that the performance of the system is affected by the number of users, the amount of data, and the type of tasks.

The response time of the system increases as the number of users increases. The response time of the system also increases as the amount of data increases.

The throughput of the system decreases as the number of users increases. The throughput of the system also decreases as the amount of data increases.

The response time of the system is also affected by the type of tasks. The response time of the system is higher for complex tasks than for simple tasks.

The throughput of the system is also affected by the type of tasks. The throughput of the system is higher for simple tasks than for complex tasks.

The results of the experiments show that the performance of the system is affected by the number of users, the amount of data, and the type of tasks.

The response time of the system increases as the number of users increases. The response time of the system also increases as the amount of data increases.

The throughput of the system decreases as the number of users increases. The throughput of the system also decreases as the amount of data increases.

The response time of the system is also affected by the type of tasks. The response time of the system is higher for complex tasks than for simple tasks.

The throughput of the system is also affected by the type of tasks. The throughput of the system is higher for simple tasks than for complex tasks.

The results of the experiments show that the performance of the system is affected by the number of users, the amount of data, and the type of tasks.

The response time of the system increases as the number of users increases. The response time of the system also increases as the amount of data increases.

The throughput of the system decreases as the number of users increases. The throughput of the system also decreases as the amount of data increases.
