THEORY OF THE EARTH

CHAPTER I. OF THE ORIGIN OF THE EARTH.

In the first chapter of this work, we have seen that the earth is a sphere, and that the atmosphere is a gas, which is attracted to the surface of the earth by the force of gravity. We have also seen that the earth is composed of various materials, which are attracted to each other by the force of cohesion.

OF THE ORIGIN OF THE EARTH.

The origin of the earth is a subject which has long attracted the attention of philosophers. It is a subject which has been discussed in many different ways, and which has given rise to many different theories.

One of the earliest theories of the origin of the earth was that it was created by the gods. This theory was based on the idea that the gods were the creators of all things, and that they had created the earth as a dwelling place for themselves.

Another theory of the origin of the earth was that it was created by the sun. This theory was based on the idea that the sun was the source of all life, and that it had created the earth as a place where life could exist.

• The earth was created by the sun.

One of the most recent theories of the origin of the earth is that it was created by the sun. This theory is based on the idea that the sun was the source of all life, and that it had created the earth as a place where life could exist. This theory is based on the fact that the sun is the source of all energy, and that it is the only source of energy that is capable of creating life.

Another theory of the origin of the earth is that it was created by the sun. This theory is based on the idea that the sun was the source of all life, and that it had created the earth as a place where life could exist. This theory is based on the fact that the sun is the source of all energy, and that it is the only source of energy that is capable of creating life.

• The earth was created by the sun.
