Total Depth, 3860', Lime. 7" casing cemented at 3620'.

This well was completed in November, 1937, with Initial Production of 420 barrels in 9 hours, flowing. Production has declined, and at the present time, well produces approximately 25 barrels of oil with a Gas-Oil Ratio of 11950.

We desire permission to acidize this well from approximately 3800' to total depth with 4,000 gallons of acid, in an effort to increase the oil production and thus reduce the Gas-Oil Ratio.
