

-2-

Grayburg on September 10, 1954 recovered 5.50 BO, 89 BW and 44.5 MCF through a 16/64" choke for a GOR of 80,909. Flowing tubing pressure was 100 psig.

The above data indicates no communication between the Yates, Seven Rivers, Queen and Grayburg pays.

Also attached is a diagrammatic sketch of the mechanical installation which was actually installed and used to segregate production from the Queen production zones.

Yours very truly,

Ralph L. Hendrickson
Field Superintendent
