DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

In order to recomplete as a gas well, the following work was performed: Well was plugged back from 3844 in the Grayburg formation to 3645' with 5' cement, utilizing Celox pin-point cementer in the Yates, Seven Rivers, and Quinas formations. Perforated various intervals with 2 shots per foot. Acidized perforations with 500 gal. 15% regular. In potential test, well flowed 1140 MCF/D against 540 psi. Estimated allowable, 20,527 MCF/D effective date of connection.
