FILE: 443-290-401

SUBJECT: Dual Completion O. J. Gilluly
"B" No. 4, Eunice-
Monument Fields

New Mexico Oil
Conservation Commission (2)
Santa Fe, New Mexico

gentlemen:

Oil Conservation Commission Order No. DC-80 dated March 15, 1954, approved dual completion in the Eunice-Monument and Elmont pools of Standard's O. J. Gilluly "B" No. 4 located 340' from the North and West lines of Section 22, T-20-S, R-37-E, Lea County, New Mexico. The order, among other things, stipulated that upon the actual dual completion a diafragma sketch of the mechanical installation which was actually used to complete and produce the seal between the strata and a special report of production, gas-oil ratio and reservoir pressure of each producing zone would be filed.

In accordance with the aforementioned order the following data are furnished:

Following a 48 hour shut-in period of both zones on May 5, 1954, the bottom hole pressure of both pays was determined at a datum of +464, which is at a depth opposite casing perforations in the Yates, Seven Rivers, Queen gas pay. The pressure as determined with a bomb in the tubing of the Grayburg was 1175 psig. At the same datum the pressure in the annulus as determined from surface pressure and corrected by use of acoustic well sounding equipment was 1010 psig for the Yates, Seven Rivers, Queen. Surface tubing pressure was 1057 psig and surface casing pressure was 1117 psig.

During a test on April 19, 1954 the Yates, Seven Rivers, Queen flowed at a rate of 4850 BOPD with a flowing casing pressure of 900 psig. A flowing production test from the Grayburg on April 12, 1954 recovered 13 BOPD, 1 BPPD and 1013 CFPD through a 20/34" choke for
