The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location to a TD 3745' with rotary tools in order to continue development of theumont Gas reserves and to meet the demands of the USGS for further development of federal leases comprising the Southeast Monument Unit. All casing points will be cemented in accordance with approved methods of the USGS and any other special requirements will be met and complied with.

It is planned to use the following casing pattern: 8 5/8" to be set at 300' and cemented w/approximately 250 sacks, circulated. 5 1/2" to be set at 3745' w/2000 sacks and perforated opposite pay zones.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
