The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location to a total depth of approximately 3850' with rotary tools in order to continue development of the Queen oil reserves and meet demands of the USGS for adequate development of the subject lease. All casing points will be cemented in accordance with approved methods of the U. S. Geological Survey and any other special requirements will be complied with.

It is planned to use the following casing pattern: 8 5/8" to be set at 300' and cemented with approximately 250 sacks, cement to be circulated. 5 1/2" to be set at 3850', cemented with approximately 1400 sacks and perforated opposite the pay zone.

Permission to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
