Re: Application for Permit to  
Dual Complete as an Oil  
Well R. Olsen, et al,  
Sarkeys Well #2 in Tubb  
Zone and Blinobry Zone,  
Section 25, Township 21  
South, Range 37 East, NMPN  
Lea County, New Mexico

Gentlemen:

R. Olsen respectfully requests a hearing for permission to complete as an oil-oil dual its Sarkeys Well #2 in such a manner that oil may be produced from the vertical limits of Blinobry zone and from the vertical limits of Tubb zone.

This well is located 660 feet from North line and 660 feet from West line of Section 25, Township 21 South, Range 37 East, NMPN, Lea County, New Mexico.

The following casing program is set up for this well: 9-5/8" set at 1150' (top anydrite), cement circulated to surface; 7" set at 6400' with 200 sacks Bottom, D. V. tool set 1400', cement circulated to surface.

It is proposed to perforate, treat and test separately the pay zones. For test purposes, each pool will be separated by use of a bridge plug or production packer.

Upon completion, the two zones will be separated by use of a retainer type production packer. Well will then be produced using two parallel strings of 2" tubing.

Attached hereto is a plat showing the acreage to be dedicated to this well, well location, and offset ownership mailing list of the operators and each has been notified of this action by copy of this letter. Also attached is a diagrammatic sketch showing the proposed mechanical completion of this well.

It is the opinion of the applicant that the manner and method proposed for the dual completion of this well is mechanically feasible and practical, and is in the interest of conservation and the protection of correlative rights.

The applicant will comply with all rules and regulations of the New Mexico Oil Conservation Commission to the maintenance and producing of this well.

Respectfully Submitted,

  
R. OLSEN
