Gentlemen:

Order No. R-586-B defines an oil well in the Tubb Gas Pool as a well which produces hydrocarbons possessing a gravity of 45° API or less.

The latest information on file in this office indicates that your Sarkeys No. 1 in Unit E of Section 25, T-21-S, R-37-E has a gravity of less than 46° API.

Effective October 1, 1957 the well will appear in the Oil Proration Schedule under the Tubb Gas Pool. You are hereby directed to file Form C-110 at your earliest convenience indicating this change in pool designation.

Yours very truly,

OIL CONSERVATION COMMISSION

R. F. Montgomery
