

GAS-OIL RATIO TESTS

[illegible]

There will be assigned a allowable greater than the amount of all produced on the official test.

During set-wall rolls test, each well shall be produced at a rate not exceeding the lap unit allowable for the pool in which well is located by more than 25 percent. Operator is encouraged to take advantage of this 25 percent tolerance in order that well can be assigned increased allowables when authorized by the Division.

Gas volumes must be reported in MCV measured at a pressure base of 15.03 psia and a temperature of 60° F. Specific/la gravity base will be 0.60.

Students understand how to use the Internet to help in research projects.

One. Well original and one copy of this report to the district office of the New Mexico Oil Conservation Division in accordance with Rule 101 and appropriate procedures.

I hereby certify that the above is true and complete to the best of my knowledge and belief.
