Oklahoma City, Okla.

Gentlemen:

A packer leakage retest on your Sarkeys No. 1 located in Unit G of Sec. 28, T-1-S, R-37-E indicated communication and this office directed you to repair this communication by letter dated July 6, 1964. To date nothing has been received in this office to indicate that the repairs have been made or that work has commenced on this well.

Since communication is known to exist in this well bore, it will be necessary that the well be shut in until the communication is repaired. I am therefore notifying your transporters that the allowable for both zones in this well has been cancelled. When the communication has been repaired and a new packer leakage test for the well has been filed, the allowables will be reinstated.

Yours very truly,

OIL CONSERVATION COMMISSION

Joe D. Ramsey

Respectfully,  
Wm. H. Hester  
Secretary

Respectfully,

A packer leakage test on your Parkers No. 1 located in Unit W of 2nd  
22, T12-S, R-37-a indicated communication and this office directed you  
to retain this communication by letter dated July 6, 1930. No data  
has been received in this office to indicate that the repairs  
have been made or that work has commenced on this well.

Since communication is known to exist in this well here, it will be  
necessary that the well be shut in until the communication is repaired.  
Furthermore, notifying your representatives that the allowable for both  
seals in this well has been cancelled. When the communication has been  
repaired and a new packer leakage test for the well has been filed, the  
all wells will be reinstated.

Yours very truly,

OIL CONSERVATION COMMISSION

Wm. H. Hester  
Secretary, District 1
