DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

The Drinkard oil zone from 6450' to 6590' was plugged off by setting a Baker Bridge plug at 6348' in the 5 1/2" casing and placing about 10' of hydramite on top of plug. The well was then perforated from 6105' to 6258' in the Tubb gas zone and from 5550' to 5675' in the Blinebry gas zone, 2" tubing was run to 6100' and a B.O.T. type B-4 production packer was set at 5722' between the two pay zones for a dual completion in the Tubb and Blinebry gas zones. The Tubb gas is to be produced through the tubing and the Blinebry gas through the tubing-casing annulus. Oil Commission order no. DC-156 was obtained for a dual in the Blinebry gas zone and the Drinkard oil zone. A request to amend subject order has been submitted to O.C.C. for dual completion in Blinebry gas zone and Tubb gas zone.

The well is now a dual in Tubb and Blinebry gas zones.
