Re: Application to Dually Complete and to establish a 80 acre Nonstandard Proration Unit in the Tubb Gas Pool for Sinclair's J. R. Cone "A" Well No. 1 in Section 26-21S-37E, Lea County, New Mexico.

Gentlemen:

Sinclair Oil & Gas Company wishes to make this application for administrative approval under Order R-316, Rule 11.2A, to dually complete their J. R. Cone "A" Well No. 1 in the Tubb Gas Pool and the Drinkard Oil Pool (present zone).

Sinclair also wishes to make application for administrative approval under Order R-586 for a Nonstandard Proration Unit consisting of 80 acres and located in the W/2 of the SW/4 of Section 26-21S-37E, Lea County, New Mexico to be assigned to subject well.

In the above matters Sinclair wishes to state:

1. Sinclair Oil & Gas Company is the operator of the J. R. Cone "A" No. 1 Well which is located in the center of the SW/4 of the SW/4 of Section 26-21S-37E. This well was completed as an oil well in the Drinkard Oil Pool on October 29, 1946 at a total depth of 6,555 feet. Five and one-half inch casing was set at total depth and cemented with 350 sacks and perforated in the Drinkard Oil zone from 6480 to 6540 feet.
2. Sinclair proposes to dually complete subject well in the following manner:
 - a. Perforate the 5 1/2" casing from approximately 6020 feet to 6245 feet in the Tubb Gas Pool.
 - b. Set a production packer below the Tubb perforations at about 6300 feet to separate the two pay zones.
 - c. Produce the Tubb gas through the casing-tubing annulus and the Drinkard oil through the tubing.
