Re: Application for Downhole Commingling
Getty Oil Company
S.J. Sarkeys Well No. 3
Blinebry and Drinkard Pools
Lea County, New Mexico

Gentlemen:

Getty Oil Company respectfully requests administrative approval for downhole commingling in its S.J. Sarkeys Well No. 3, located in Lea County, NM. At present, this is a dual Blinebry-Drinkard oilwell. This dual completion was granted by Division Order No. MC-1499 of the Oil Conservation Division in 1964. Currently the Blinebry side and the Drinkard side are both operated by plunger lift.

At the present time we are unable to produce these zones utilizing plunger lift beneath a packer. Neither the Blinebry or Drinkard zones are responding. However, a production test was obtained for each zone for submittal. If downhole commingling is granted we will produce the two zones, utilizing one tubing string, one rod string, and one pump. Also, no packer will be used. This method of completion should allow the zones to be productive and, therefore, increase production on the Sarkeys lease.

This well qualifies for administrative approval in accordance with State-wide Rule 303, Paragraph C; and in support thereof, the following facts are submitted:

1. The attached plat shows the S.J. Sarkeys lease. Well No. 3 is located in Unit C, Section 26, T-21-S, R-37-E, Lea County, New Mexico. This area is shaded on the attached plat.
2. The latest tests are as follows:
Blinebry: 9/28/81 - 14 BOPD 6 BWPD 110 MCFPD
Perforations: 5734' - 5850'
Drinkard: 9/4/81 - 13 BOPD 5 BWPD 11 MCFPD
Perforations: 6463' - 6488'
