THE UNIVERSITY OF CHICAGO  
DIVISION OF THE PHYSICAL SCIENCES  
DEPARTMENT OF PHYSICS

REPORT OF THE PHYSICS DEPARTMENT FOR THE YEAR 1961-1962

CHICAGO, ILLINOIS

During the year 1961-1962, the Department of Physics at the University of Chicago has been engaged in a wide variety of research activities. The following is a summary of the major accomplishments of the department during this period.

The first major area of research is in the field of elementary particle physics. The department has been actively involved in the study of the properties of the proton and neutron, and in the investigation of the structure of the nucleus. The results of these studies have been published in a number of papers in the field of nuclear physics.

The second major area of research is in the field of condensed matter physics. The department has been engaged in the study of the properties of the solid state, and in the investigation of the structure of the crystal lattice. The results of these studies have been published in a number of papers in the field of condensed matter physics.

The third major area of research is in the field of astrophysics. The department has been engaged in the study of the properties of the stars and galaxies, and in the investigation of the structure of the universe. The results of these studies have been published in a number of papers in the field of astrophysics.

The fourth major area of research is in the field of geophysics. The department has been engaged in the study of the properties of the earth and its atmosphere, and in the investigation of the structure of the planet. The results of these studies have been published in a number of papers in the field of geophysics.
