FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

The present total depth of subject well is 3780'. 7" casing is set at 3496' and perforated from 3700-3720'. We propose to cement off the present producing section since it is non-commercial and deepen well to approximately 7900' to test the Ellenburger formation. We estimate that 7900' of 5" OD casing will be cemented to total depth with 370 sacks. Well will be completed by perforating opposite oil pays and acidizing as required.
