

OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below.

THEORY OF THE EARTH

CHAPTER I

THE EARTH AND ITS HISTORY

The Earth is a planet of the solar system, and is the only one of which we have direct knowledge. It is a sphere, and is composed of a solid inner core, a liquid outer core, and a solid crust. The crust is the part of the Earth which we live on, and is composed of rocks and minerals. The crust is divided into continents and oceans. The continents are the large land masses, and the oceans are the large bodies of water. The Earth is covered with a thin layer of atmosphere, which is composed of gases. The atmosphere is divided into layers, and the lowest layer is the troposphere. The troposphere is the part of the atmosphere in which we live, and is the part in which most of the weather occurs. The atmosphere is heated by the sun, and the heat is transferred to the Earth's surface. The Earth's surface is heated by the sun, and the heat is transferred to the atmosphere. The atmosphere is heated by the sun, and the heat is transferred to the Earth's surface. The Earth's surface is heated by the sun, and the heat is transferred to the atmosphere. The atmosphere is heated by the sun, and the heat is transferred to the Earth's surface.
