

## NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

## MISCELLANEOUS REPORTS ON WELL

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-offs, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

[illegible]

. I found that the two main parts of the PI were, first, the  
the "main body" of the document, which was the most important part,  
and second, the "conclusion" or "summary" part, which was the least  
important part. The "main body" was divided into three sections:  
the "introduction", the "body", and the "conclusion". The "intro-  
duction" was the first section, and it contained the title, the  
author's name, and the date. The "body" was the middle section,  
and it contained the main text of the document. The "conclusion"  
was the last section, and it contained the summary of the main points.  
The "main body" was the most important part of the document, and  
it was the part that I spent the most time on. The "conclusion"  
was the least important part, and it was the part that I spent the  
least time on.
