

NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELL

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-offs, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

THEORY OF THE EARTH AND ITS HISTORY

CHAPTER I. THE EARTH AND ITS HISTORY

The Earth is a sphere, and its history is the history of the changes which have taken place in its form and composition since its origin. The history of the Earth is divided into three main periods: the Primary, the Secondary, and the Tertiary. The Primary period is the earliest, and is characterized by the formation of the Earth's crust and the development of the first life. The Secondary period is the middle period, and is characterized by the development of the various classes of animals and plants. The Tertiary period is the latest, and is characterized by the development of the human race and the formation of the modern world.
