Hobbs, New Mexico 88240

CARSON-WATSON COM. NO. 2
LOCATION H-33-21S-37E
LEA COUNTY, NM

The Carson-Watson No. 2 is currently a dual well producing from the Blinbry and Tubb formations. The Blinbry produces 110 MCFD while the Tubb produces 35 MCFD.

On November 20, 1990, this well failed a packer leakage test and Mobil is in the process of accumulating the data necessary to apply for a downhole commingling permit. Therefore, Mobil is requesting a 30 day extension to allow us to produce the Carson-Watson No. 2 while a permit is obtained.

Please call Manuel Jimenez at (915) 688-1686 if you have any questions regarding this well.

Sincerely,

G. N. Miller
Environmental, Regulatory
and Loss Prevention Supervisor
