The elevation of the derrick floor above sea level is 3574 ft.

DETAILS OF WORK

(State nature of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Acidized December 10, 1949 from 7412 to 7450 with 8000 gal. 10% acid. Acidized into water and was unable to get ~~any~~ suitable test by swabbing. Installed Reda pump January 28, 1950. Zone tested 10 bbls water and 1 bbl oil per hr. We find this uneconomical to produce. Intend to set plastic and gravel plug and squeeze off perforated section. We then intend to perforate and test the drinkard section from 7115 to 7155.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
