The elevation of the derrick floor above sea level is 3573 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Gun perforated from 7412 to 7429 and from 7440 to 7455. Packer set at 7340. Swabbed water from tubing and oil filled up 1000 feet during 12 hour shut-down. Acidized with 1000 gallons with treating pressure of 3000 lbs. on tubing and 1900 lbs. on the casing with no apparent pressure break. Recovered acid water and well swabbed approx. one bbl/hr. of high gravity oil. Retreated with 2000 gallons of acid. Results of this treatment are not yet known due to a bad fishing job. Lowell Elastic plug set from 7532 to 7433. T.D. 7433.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
