TEST WATER SHUT-OFF PULL OR ALTER CASING MULTIPLE COMPLETE SHOOT OR ACIDIZE ABANDON* CHANGE PLANS (Other)	WATER SHUT-OFF FRACTURE TREATMENT SHOOTING OR ACIDIZING (Other) (Note: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)		

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This well was a simple detailed in 1051 has Amanda and Illume and Il

This well was originally drilled in 1951 by Amerada and plugged and abandoned the same year. The original total depth was 7247 ft. We re-entered the well in February, 1969, and cleaned out to 7245 ft. 4 1/2" casing was set at 7245 ft. and cemented with 350 sacks cement. We perforated at 7141 - 7081 ft. with 20 holes. This zone tested 100% water. A cast iron cement retainer was set at 7072 ft. and perfs. 7141 -7081 ft. were squeezed with 150 sacks. Perforations were made at 7050 - 6895 ft. (17 holes). This zone tested 30 bbls. water and 3 bbls. oil per day. A cast iron bridge plug was set at 6870 ft. and 25 ft. of cement was dumped on top of C.I. Bridge Plug. Made perforations at 6062 - 6077 ft. (15 holes). This zone tested 4 bbls. oil per day and 8 bbls. water per day.

We propose to fill the 4 1/2" casing with mud. Find casing free point. Spot an adequate amount of cement to fill 4 1/2" casing from 6200 ft. to casing free point. Shoot casing off at free point; and as casing is pulled out of hole, use casing to spot a 100 ft. cement plug at 4350 - 4250 ft. (San Andres) a 100 ft. cement plug across surface casing shoe (306 ft.) from 350 - 250 ft. and a 10 sack cement plug at the surface. This work to begin immediately.

Instructions

General: This form is designed for submitting proposals to perform certain well operations, and reports of such operations when completed, as indicated, on Federal and Indian lands pursuant to applicable Federal law and regulations, and, if approved or accepted by any State, on all lands in such State, pursuant to applicable State law and regulations. Any necessary special instructions concerning the use of this form and the number of copies to be submitted, particularly with regard to local, area, or regional procedures and practices, either are shown below or will be issued by, or may be obtained from, the local Federal and/or State office.

Item 4: If there are no applicable State requirements, locations on Federal or Indian land should be described in accordance with Federal requirements. Consult local State or Federal office for specific instructions.

Item 17: Proposals to abandon a well and subsequent reports of abandonment should include such special information as is required by local Federal and/or State offices. fluid contents not sealed off by cement or otherwise; depths (top and bottom) and method of placement of cement productive zones, or other zones with present significant above plugs; amount, size, method of parting of any casing, liner or tubing pulled and the depth to top of any left in the hole; method of closing top of well; and date well site

We propose to construct a marker at the surface according to specifications and clean the location for inspection.

This program was approved by telephone conversation with Mr. Gordon, June 17, 1969, and Mr. Brown on June 18, 1969, both men in Hobbs, New Mexico, office.
