(County or Subdivision)New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location to a depth of approximately 3725' with rotary tools and from 3725' to a total depth of approximately 3930' with reverse circulation tools. All casing points will be cemented in accordance with approved methods of the U. S. Geological Survey and any other special requirements will be complied with.

It is proposed to use the following casing pattern: 10 3/4" casing to be set at approximately 290' with 250 sacks cement, cement to be circulated; 5 1/2" casing to be set at approximately 3725' with approximately 1360 sacks cement or sufficient cement to cover salt section. If necessary, the pay section will be shot.

Approval to produce the well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
