Detailed account of work done, nature and quantity of materials used, and results obtained.

To definitely determine if water was going out the bottom around the old plug a radioactive tracer survey was run on 12-5-61. This survey indicated the major zone of water entry to be between 3846' and 3851'.

Since the major zone of water entry is the interval to be flooded, the proposed remedial work, outlined by our 9-331a dated 11-29-61, will not be performed. \*
