(County or Subdivision)

(State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location to a total depth of approximately 9250' with rotary tools in order to continue to development of McKee oil reserves and meet demands of the U.S.G.S. for further development of federal leases comprising the Southeast Monument Unit. All casing points will be cemented in accordance with approved methods of the U.S.G.S. and any other special requirements will be met and complied with.

It is planned to use the following casing patterns: 10-3/4" to be set at 250' and cemented with approximately 250 sacks, cement to be circulated. 7-5/8" to be set at 4,000' and cemented with 500 sacks. 5-1/2" to be set at 9250' with 160 sacks and perforated opposite pay zones.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
