June 24, 19 **63**

Well No. **24** is located **660** ft. from **S** line and **660** ft. from **W** line of sec. **27**
SM/4 **SM/4** **Sec. 27** **20-S** **30-E** **NMPN**
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
NMPN **Las** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **3542** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The subject well produced, on 11-3-62, 761 MCF, 40 bbls 44° gravity distillate from the Warren Minner and on test dated 10-17-62 the Warren Tab produced 1297 MCF, 30 bbls 57° gravity distillate.

We now propose to drill out packer at 6290' & drill to a new TD of approximately 6600'; run G/R Newbron... laterolog from TD to 6600'; notch selected intervals of "open-hole" pay zone with abrasive jets and break down each notch separately; subject to the indicated capacity of the Driskard, treat 2/20,000 gals. lsc. crude, 30,000 lb. oil. & 1000 lb. "ADOMITE" Additives" provided the pay section has tight, thin, productive section. In the event pay interval is indicated to be a massive carbonate section, stimulate w/10,000 gals 15% LOTS acid. Then run packers, install triple completion equipment & place on production.

We propose to accomplish this work by authority of NMCCG Order No. R-2503.
 I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
