(State or Territory)

The elevation of the derrick floor above sea level is 3501 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

In an effort to increase production it is proposed to acidize existing perforations 7300' to 7492' with 20,000 gallons of acid using rubber ball sealers as a blocking agent.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
