(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wildest Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a 5100' Delaware Sand test as follows: Cable Tool from surface to 300'. Set 8 5/8" casing at 300' and circulate cement.

Rotary tool from 300' to an approximate total depth of 5100' unless commercial production is found at a lesser depth. A string of 4 1/2" casing cemented to above the base of salt will be set if commercial production is found.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
