The elevation of the derrick floor above sea level is 2542 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Closson No. 3 has been shut-in. It is proposed to move in a workover unit, pull tubing and formation packer, clean out to total depth, run a radio-activity log, acidize if necessary and perform any additional work required in an attempt to restore this well to producing status.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
