April 3, 1950

Well No. 4 is located 660' ft. from N line and 660' ft. from E line of sec. 6
9 Sec. 0 22S 37E 10N
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
South Tujuche Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3607 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Water encroachment in the Tom Closson Lease No. A well has reached the stage that the well is dead and cannot be swabbed in and made to flow. Prior to going dead, this well had ceased to produce any oil and the only production from the well was water and gas, the gas being sold to the New Johnson Carbon Black Company.

Since there is part of the Seven Rivers producing horizon cased off, it is proposed to plug off the bottom water by setting a retainer in the bottom of the casing at approximately 3754' above the open hole and squeezing off the lower part of the Seven Rivers from 3754' to 3830' TD. After successfully squeezing off this bottom water, it is proposed to perforate the upper part of the Seven Rivers from 3645' to 3704' (now cased off) and try to recomplete as an oil or gas well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
