July 22, 19 53

Well No. 8 is located 600 ft. from N line and 750 ft. from E line of sec. 6
NE 1/4 Section 6 22 S 36 E 136E
(4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well No. 8 was re-completed as dry gas well as follows: tubing was pulled; ran gamma ray and neutron log from surface to 3740'; set Baker Model 201 retainer at 3714'; dumped 4 sacks (20') cement from 3694' to 3714'; perforated 7" casing with 2 jet shots per foot from 3502' to 3524'; re-ran tubing to 3681' with hookwall packer set at 3450'; and ran wash three times and well came in. Dr was started on July 14, 1953 and completed on July 17, 1953.

The well was allowed to clean itself of fluid. After which, it was tested for 1000 psi dry under 30/32 choke and flowed with 200 tubing pressure. This test was completed July 20, 1953 and testing is being continued. It was not necessary to acidize the well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
